

# Leo Scott

---

2nd February 2017

## Could you talk me through the day to day responsibilities of your current role?

---

Contracting for over a year, before that doing full time.

Current role is Agile. Daily sprints. Poker sessions. Scrum.

In between times he's hands-on front-end coding.

Runs the afternoon standup.

Has *some* experience with managing small teams. Mentorship / code reviews. This is something he'd like to expand on and grow.

## What do you feel has been your career highlight so far?

---

Didn't really know. I agreed that this was a weird question.

## Why have you decided to look for a new role?

---

Would like to start working in a London based company. Seems to think that London companies run at a faster pace.

When I pushed him on this he said because there's more investment in London, there's more pressure to push him. I didn't really understand fully what he was getting at.

## Could you explain to me what you understand about Firefly and why you would like to work here?

---

Education sector is always a good place to work. Seasonal so always new things to do.

Helping kids is a plus, has considered going into teaching.

## How does this role fit into your career aspirations?

---

Really thinks he has the leadership attitude. Feels this role would drive him. Would like to do lots of homework and is keen to drive others forward.

Likes the idea of a nice balance between hands-on and leadership. Would like to keep up with the tech, for future career prospects. (i.e., not go into a full time management role)

## Can you tell me about your JS experience and the type of problems you like solving

---

7 years experience.

Started off with jQuery, but wanted more MVC. Comes from a background of using Vanilla JS too.

Has experience of creating restful API's, node, gulp, web-pack, bootstrap, SASS, Less, etc.

## Do you have any side projects?

---

Didn't ask. Running out of time.

## What do you think of frameworks like React / Angular. Any differences you see between them. (trying to uncover their approach to progressive enhancement)

---

Thinks React is going places. Thinks the HTML in JS is savvy.

Would you always use a framework? > depends what the requirements are!  
Small sites don't require such power.

Didn't mention progressive enhancement even when pushed.

## Can you talk about your approach to modularisation (css / BEM, etc)

---

Have a apps folder, then a module folder, and an assets. Sounds like a flat system.

```
+ module
- + test.html
- + styles.css
```

Basically what we do.

## Salary

---

£70,000 +

(Ideally £75K)
